

Meensou India Private Limited develops carbon offset/credit projects aiming at social capacity building and economic growth with equitable wealth distribution and environmental protection.

## Front-End Developer Job Description

### Job Summary

One of the central objectives of our company is to keep our team of hardworking specialists content and motivated. That's why we need you, a devoted front-end web developer, to be part of our superstar team. You will have the exciting opportunity to drive our capacity for handling operational issues while advising our team on the process of writing code and engineering systems that will make our entire codebase more reliable, testable, and scalable. You will also advance innovative and comprehensive tools and practices to improve deployment and testing. If you want to play an integral role in planning processes with the support of our entire engineering team, then consider working for us.

### Job Responsibilities

- Interact with team members to improve our engineers' tools, technology stack, and application performance and stability.
- Design the front-end for the web based applications as per the requirements
- Use a variety of programming languages in order to create user-friendly web pages
- Work in multidisciplinary team with other professionals such as back-end developers and web designers
- Build high-quality graphics and visual elements
- Optimize our web applications for maximum speed
- Design mobile-based features
- Always stay consistent with our brand guidelines
- Make suggestions for better solutions to problems
- Keep abreast of latest and emerging technologies

### Job Skills & Qualifications

Required:

- Working knowledge of Web development technologies - HTML, CSS, JS, JQuery

- Proficiency in deploying and maintaining front-end for applications

Preferred:

- Experience with Bootstrap framework
- Experience with DOM manipulation
